years productronica

Our productronica 2025 stand will feature:

PCB Handling Equipment

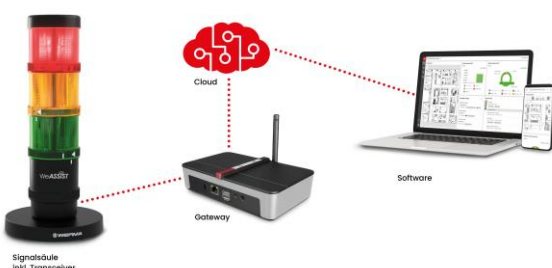

FlexLink offers a complete line of PCB handling units that incorporate standard assembly features throughout the product range, high throughput PCB handling modules provide PCB transport, PCB buffering/accumulation, laser marking and a full range of handling and routing alternatives.

SMART Warehouse / Mini

For production environments with limited space. cts developed the Smart Warehouse / Mini to support small production areas with optimised material organisation. Through intelligent warehouse logic and automated inbound and outbound processes, you maintain control over your materials without wasting valuable space.

Other stand highlights include the latest addition to the AdoptSMT range: **WeASSIST** by **WERMA**

WeASSIST Process Optimisation

The Plug&Play system solution gives you complete transparency in your production. Machine and workstation data is recorded in real time, visualised and automatically evaluated. Incidents become immediately apparent, downtime is reduced and product quality increases.
